

### The ask

 The Board is asked for general and specific feedback on the plan

### **Background**

- This is a refreshed media strategy
- The new strategy is based on research and insights
- Journalism has profoundly changed and our media management needs to change with it.
- This is part of the Whirinaki workstream.
- This supports the Communication & Engagement strategy.
- Sits alongside the Social Media Strategy (pending)

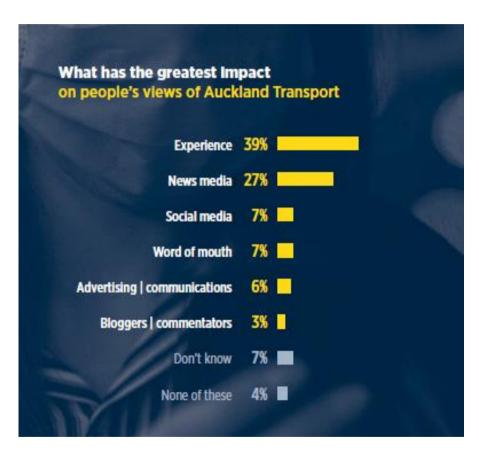

# A third of all coverage was Akl: we don't suffer from a lack of coverage

#### REGIONAL BREAKDOWN Auckland was discussed in 31% of coverage, equal to all the other regions More than three quarters of reports about Northland with major population centres were road-focused, emphasising private vehicles and (Waikato, Wellington, Canterbury, and freight transport. This was largely due to coverage of Otago) combined. Other regions were the COVID-19 freight crisis, which prompted calls for each discussed in less than 4%. improved road and occasionally rail freight access between Whangarei and Auckland. 0% < 1% 1-10% Waikato coverage included 11-20% discussion of positive safety 21-30% developments and the launch of 31-40% the Te Huia commuter train, but also frustration about congestion and road safety, especially south of Auckland following COVID-19 Alert Level changes and holiday periods.

## The starting point

 From the Whirinaki Blueprint

### Methodology

- 1,785 random sample pieces of coverage
- Nov 2020-April 2021
- 4 main themes:
- Safety and experience
- Infrastructure + development
- Service and accessibility
- Climate change and transport emissions.
- Insights from monthly media reporting going back several years.

## **Key findings**

Projects are reported individually, in isolation. As are the different modes.

No journalist is reporting on transport in a policy sense

Meaning coverage on transport is fractured and dis-jointed and we are leaving readers/watchers to join it all together to make sense.

There are opportunities to work with journalists who don't have a history of covering local government, e.g. climate or business journalists.

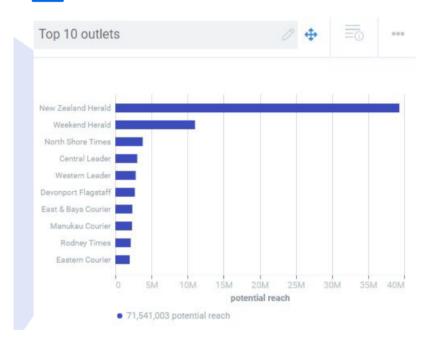

Benefits to customers are often missing in stories.

#### **Top Audiences: Print media outlets**

Top 10 media outlets that have reported on Auckland Transport in last 365 days and the rankings of their per clip readership

Weekend Herald - 395,847 New Zealand Herald - 358,668 Devonport Flagstaff - 87,480 Central Leader - 63,423 North Shore Times - 50,301 East & Bays Courier - 48,114 Easter Courier - 44,834 Manukau Courier - 38,273 Rodney Times - 37,179 Western Leader - 28,431

#### It is worth giving local outlets some attention.

Their readership adds up, likewise for online outlets.

### Plan on a page

Current state

 No transport narrative, poor media understanding, stories on projects not transport, difficult for readers to follow, single focus stories.

Future state

• Reporting by greater number of journalists, stories about transport not AT, stories that show the reader the benefits, coverage that explains the trade offs.

How

 Attention to less informed reporters, pitch the benefits to customers, lead the conversation on key topics: safety, climate, cycling, rail. Make better use of our spokespeople.

Ultimate goal

Elevate the story to be about transport not AT

### **Next steps**

#### **Underway**

- Identified, and are now media training, key subject matter experts as spokes people.
- On going relationship building with journalists.
- Update the Social Media Strategy – audit of channels underway.

### **Completed**

- We have created the basic guide for journalists
- Created a crisis communications plan including agreed key messages
- Creating pre-recorded audio for radio
